DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8-10, 15-23, 27 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Whitehead (US 6,239,928).

Whitehead discloses a wing mirror unit for a motor vehicle including a mirror foot (14), mirror housing (12), and an actuator (see fig. 5), wherein the mirror is foldable between folded and transverse extended positions, and the actuator moves adjacent surfaces of the housing and foot transversely with respect to each other between a first position where there is a slit between them and a second position where they abut (see figs. 1 and 2); note that the left edge of housing 12 abuts foot portion 90 in the second position of fig. 1; note that there is a slit or space between these elements in the first position of fig. 2).

Art Unit: 2872

Regarding claim 9, Whitehead further shows the unit to be in the second position (abutment) during adjustment between the folded and unfolded orientations.

Regarding claim 10, Whitehead teaches an actuator enabling pivoting of the housing.

Regarding claims 15-19, Whitehead further discloses a linear actuator (see fig. 5), contact surfaces to be formed of elastic material (the materials taught in the reference are inherently elastic to a certain extent), and translation-type movement of the housing. Regarding Claim 19, note that deformation of the contact surface can occur simultaneously with pivoting of the mirror housing.

The limitations of claims 20-23, 27 and 28 are met by Whitehead as discussed above. Regarding claim 20, note that since the actuator is located in the housing/support arm, it is pivotally connected to the mirror foot.

Response to Arguments

3. Applicant's arguments filed August 8, 2007 have been fully considered but they are not persuasive. Applicant argues that the prior art does not teach a slit that is formed between adjacent surfaces of the mirror foot. However, applicant is

Art Unit: 2872

reminded that the mirror foot of the present invention is not structurally different from the mirror foot of the prior art. Therefore, it appears that the rejection is deemed proper at this time of the prosecution.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
